

ECG examples - PREPROCESSED (z-scored), no reconstruction

51 example beats, grouped by MIT-BIH annotation type

Threshold (model decision): 0.0434

Distribution:

N Normal sinus beat	10
V Premature ventricular contraction (PVC)	8
F Fusion of ventricular and normal	8
L Left bundle branch block	8
A Atrial premature beat (APC)	6
R Right bundle branch block	5
/ Paced beat	4
f Fusion of paced and normal	2

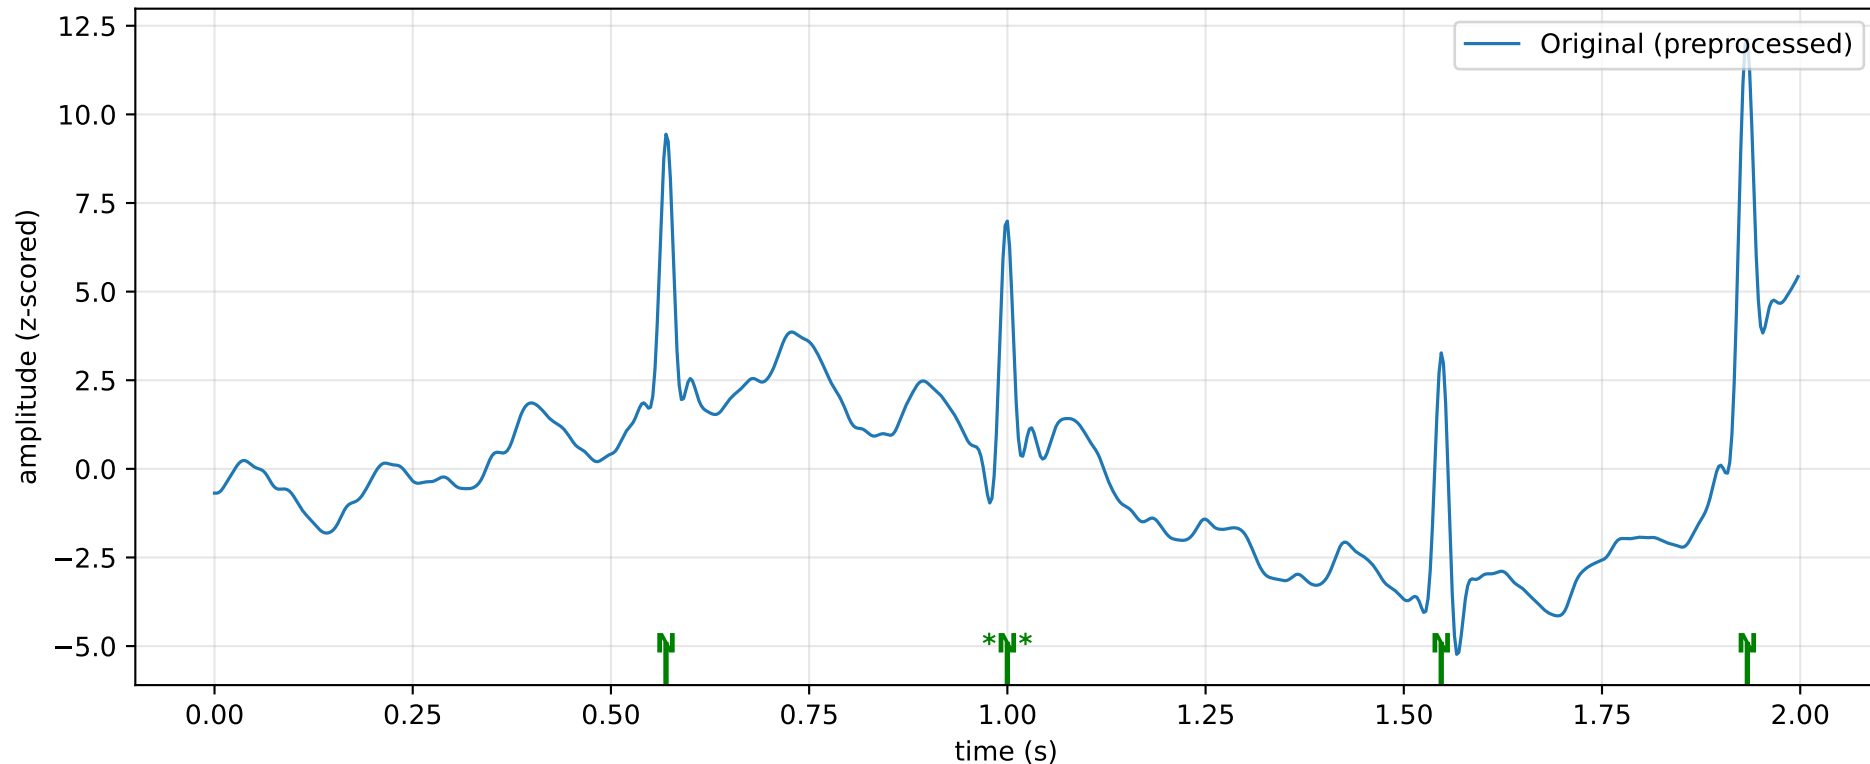

Labels on each page:

Symbol	symbol of the centre beat (the one that labels the window)
Type	plain-language meaning
Source	MIT-BIH record + sample index (reproducible)
In window	ALL annotated beats inside this 2-second window, listed as time-from-centre:symbol (e.g. -380ms:N *0ms:V* +420ms:N) Asterisks mark the centre beat - the one whose label is the window label. Other beats also affect the residual but their labels are NOT used. This is the per-beat-label limitation.
Residual	model's reconstruction error on the window
Threshold	the F1-optimal value 0.0434
Decision	model's NORMAL vs ANOMALY call
Outcome	TP, FN, TN, FP

On the plot itself: short vertical ticks at the bottom mark every annotated R-peak in the window. Green = NORMAL beat, magenta = ABNORMAL beat.
The centre beat's symbol is shown in *asterisks* in the textual list.

Section: N - Normal sinus beat

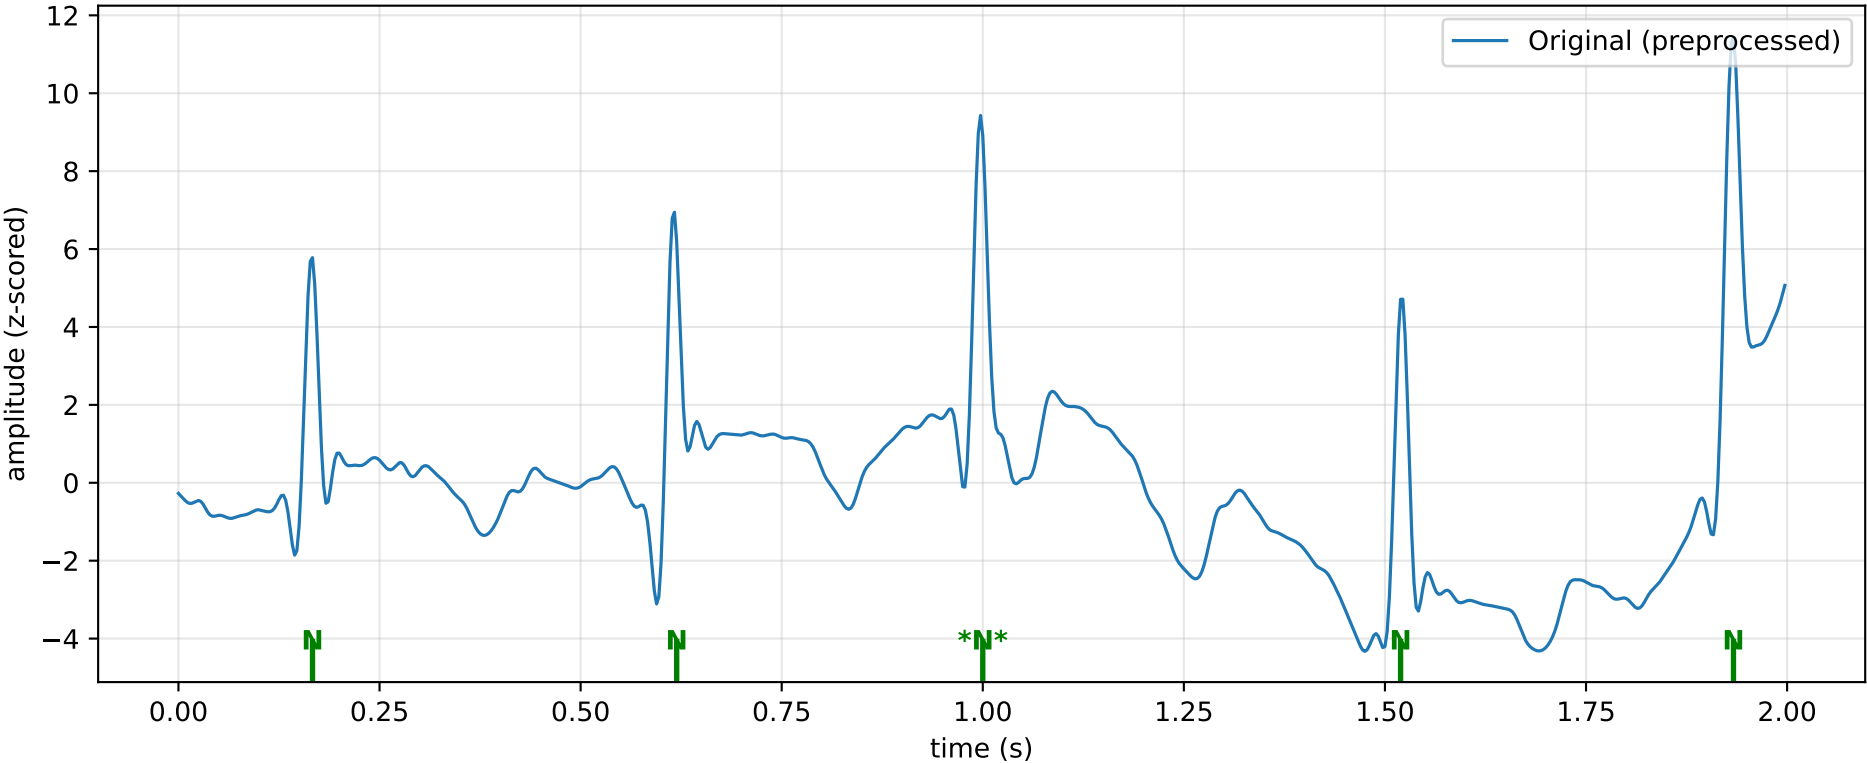

FP: Normal sinus beat (N)

Symbol	N (centre beat - the one that labels the window)
Type	Normal sinus beat
Source	record 222, sample 615454
