

Blind labeling — cardiologist worksheet

48 beats, randomized order

Instructions:

1. For each beat, mark NORMAL / ABNORMAL / UNREADABLE.
2. If abnormal, optionally jot the suspected beat type.
3. DO NOT confer with anyone or look at the model output.
4. Return the marked sheets - we'll compare with the model's decisions and the MIT-BIH reference labels.

We will compute Cohen's kappa between your labels, the model's labels, and the MIT-BIH reference labels - this is the rigorous validation step.
